Summary

Full-Stack Software Engineer with strong experience architecting and delivering scalable web applications and microservices using Next.js, React, Node.js, and TypeScript. Proven track record building webhook processing engines, high-throughput automated PDF generation services, asynchronous queues, and secure multi-role APIs. Proficient in cloud deployment, containerization (Docker), and database management (PostgreSQL, MongoDB).

Education

Alexandria University **Sep. 2019 – Jul. 2024**
Bachelor of Science in Computer and Systems Engineering *Alexandria, Egypt*

Skills

Languages: JavaScript, TypeScript, PHP, Python, Java, C/C++, SQL, HTML5/CSS3, Dart
Frontend: Next.js, React.js, Tailwind CSS, Redux/Context API, Flutter, Angular
Backend: Node.js, Express.js, RESTful APIs, Webhooks, Microservices, Spring Boot, Swagger/OpenAPI
Databases & Caching: PostgreSQL, MySQL, MongoDB, Redis, Neo4j
DevOps & Cloud: Docker, AWS (S3, EC2), Azure, CI/CD, RabbitMQ, Linux, Git
Core Concepts: OOP, System Design, Data Structures & Algorithms, RBAC, Async Architecture

Experience

Obelion.ai **Nov. 2024 – June. 2026**
Software Engineer (Full-Time) *Remote, Egypt*

- Engineered responsive, scalable full-stack web applications using React, Next.js, and Node.js/Express.
- Designed and implemented modular backend RESTful APIs with JWT authentication and granular Role-Based Access Control (RBAC).
- Containerized applications and microservices with **Docker**, streamlining environment parity and CI/CD deployment.
- Collaborated in an agile team to design scalable architecture, participate in code reviews, and optimize database queries.

Diagnosit **Jul. 2025 – Jun. 2026**
Software Engineer (Part-Time) *Remote*

- Architected an asynchronous **Webhook processing pipeline** to reliably ingest and validate real-time external diagnostic data with idempotency and error-retry mechanisms.
- Developed an automated, high-throughput **dynamic PDF generation service** for clinical diagnostic reports and analytical summaries, significantly reducing export latency.
- Constructed secure backend microservices using Node.js and PostgreSQL with optimized relational data models and caching.
- Configured background job workers and Docker containers for decoupled execution of heavy document generation tasks.

Projects

Diagnosit – Clinical Diagnostic & Automated Reporting Platform | *Next.js, Node.js, Webhooks, PDF Engine, Docker, PostgreSQL* **2025**

- Engineered an end-to-end diagnostic workflow system with real-time patient case tracking, automated status triggers, and medical report pipelines.
- Built a dedicated automated **PDF generation engine** supporting dynamic templating, vector charts, and asynchronous document distribution.
- Implemented custom **webhook listeners** for instantaneous synchronization with external laboratory and diagnostic data providers.

CloudGate – Multi-Cloud Automation & Provisioning Tool | *Next.js, Express.js, RabbitMQ, AWS SDK, Azure API, Tailwind CSS* **2025**

- Created a centralized dashboard to automate cloud infrastructure provisioning across AWS, Azure, GCP, and Alibaba Cloud.
- Engineered microservices backend APIs utilizing **RabbitMQ** message queues for decoupled, non-blocking cloud resource orchestration.
- Designed an interactive Next.js analytics interface for real-time infrastructure cost calculation, usage comparison, and cloud metrics visualization.

Attend – Multi-Role Event Management & Booking Platform | *React, Node.js, Express.js, PostgreSQL, JWT, Context API* **2025**

- Architected an all-in-one ecosystem catering to 4 distinct user roles (Admin, Attendee, Venue Owner, Supplier) for seamless event coordination.
- Implemented secure event scheduling, venue reservation workflows, supply ordering, and role-based access control (RBAC).
- Designed normalized PostgreSQL relational schemas ensuring high integrity and fast execution for concurrent booking transactions.
